

Recruitment test | JS Developer | skygate.io

Thanks for your application! As promised, below you will find a test task. You have 5 days to solve it, and if you'll need more time or have any questions, let us know. We will try to answer them as soon as possible.

1. Fetch and display table of companies, table should have `id, name, city, total income (sum of company incomes), average income (average of company incomes), last month income (sum of last month incomes) columns.
2. You should create your own implementation of table. Bootstrap, antD... it is not allowed.
3. Implement sorting, first click on the column header should sort table ascending order by given column, second click by descending order.
4. There should be input that we can filter the result of the table by all fields.
5. Table should be paginated.
6. App should be responsive (It should work well on both desktop as well as on smaller devices such as mobile phones, tablets)
7. Project should contain full documentation (eg. readme)
